

# Low Carbon Fuels Coalition

## What is the Low Carbon Fuels Coalition (LCFC)?

The LCFC is a coalition of diverse companies and organizations who all share the common goal of decarbonizing our transportation fuel supply.

The LCFC is dedicated to advocating for the support and expansion of robust Clean Fuels Standard (CFS) policies at the state and federal level.

The LCFC's market-based and technology-neutral approach means that, rather than picking winners and losers, policies are designed so that all fuels are measured by actual performance—specifically by measuring each fuel's total carbon intensity, based on its entire lifecycle of production and use.

## Where Does the LCFC Work?

The LCFC engages in legislative and regulatory initiatives in states across the country and at the federal level, as well as in collaborative, international advocacy campaigns.

In individual states, the LCFC partners with local stakeholders to pass CFS legislation or expand CFS policies, depending on the needs on the ground. Whether an LCFC led and managed campaign or contributing policy and technical expertise on in-state leadership committees, the LCFC is instrumental in advancing CFS policies.

Current legislative and regulatory initiatives include the states of California, Hawaii, Illinois, Massachusetts, Michigan, Minnesota, New Jersey, New Mexico, New York, Oregon, and Washington, as well as ongoing advocacy for a national CFS. Additional states are in preliminary stages.

A Clean Fuel Standard (CFS) requires fuels to become less carbon intensive over time. Carbon intensity (CI) is a measurement of a fuel's total lifecycle emissions—not just at the tailpipe—including its production, transport, and use.

A CFS sets up a credit system based on CI scores for those who refine, blend, produce, or import fuel. The CI scores are compared to an annual target that decreases over time. Fuel producers with lower carbon fuels sell credits to producers of fuels that exceed the target CI scores. The program both tracks and measures greenhouse gas reductions, and provides a market incentive to accelerate and maximize those reductions.

## THE LCFC's Proven Success

- The Coalition's leadership and members were key to the passage and regulatory development of successful CFS policies in California, Oregon, and Washington
- The LCFC stood up the successful 2024 campaign to pass a CFS in New Mexico and will continue to contribute policy and technical expertise to regulatory implementation
- The Coalition is recognized as a sought-after thought-leader, organizer, technical expert, and successful advocate for CFS policy design, features, and benefits
- The Coalition has been successful in communicating CFS policy benefits to both decision makers and public stakeholders.

## Why Should Your Company or Organization Join the Coalition?

The LCFC is a membership-based trade association comprised of stakeholders across the clean fuel industry value chain. Four membership tiers provide various benefits.

Depending on level, LCFC members can gain:

- Up-to-the-minute legislative and regulatory tracking
- Access to our experienced policy, lobbying, and communications experts
- Networking opportunities with a wide range of stakeholders in the clean fuel sector
- Leadership opportunities to guide the coalition's organizational and policy goals, legislative priorities, and regulatory activities
- Participation in targeted state and federal level CFS campaigns
